

Day Planning - SOP

Titan Track and Trace

1. Day Planning - Data Upload

1 Open Day Planning

- Navigate to **Production** → **Day Planning**.
- Click the **Upload** button.

2 Download the Template

- Click **Template** to download the standard Excel format.
- Fill in all required batch details in the downloaded template.
- Ensure the file format and column headers are not modified.

3 Upload the Excel File

- Click **Drop a file** or **Browse**.
- Select the completed Excel template.
- The system supports uploading multiple batches in a single Excel file.

4 Preview Uploaded Data

- After uploading, the system displays a **Preview** table.
- Verify all uploaded records.
- Edit any incorrect values directly in the preview before submission.

5 Submit or Cancel

- Click **Submit** to move all validated batches to the Day Planning Pick Table.
- Click **Cancel** to abort the upload process. No data will be saved.

2. Day Planning - Pick Table

The submitted batches are displayed in the Day Planning Pick Table.

Available Columns

S.No	Last Updated	Plating Stock Number	Action	No. of Trays	Input Quantity
Process Status	Lot Status	Current Stage	Type of Input	Polishing Stock Number	
Plating Color	Category	Polish Finish	Version	Tray Category / Capacity	Source
Remarks					

3. View Visual Aid

1 Hover over the Plating Stock Number

2 The system displays

- Product image
- Basic product information

- 3 Click the hover card to navigate to the Visual Aid page for detailed reference.

4. Tray Scan Process

1 Start Tray Scan

- In the Action column, click **Tray Scan** for the required batch.

2 Scan Tray IDs

- The Tray Scan window opens.
- Scan or manually enter each Tray ID.
- The system validates every tray.

5. Update Tray Quantity

At the top of the Tray Scan window:

- Edit the Tray Quantity if required.
- The updated quantity is used for tray validation.

6. Edit Lot Quantity (Before Scanning)

Before scanning Tray IDs:

- Click the **Edit** icon in the Action column.
- Modify the Lot Quantity if required.
- The system automatically recalculates the required number of tray scan slots based on the updated quantity.

Note: Lot Quantity can only be edited before Tray ID scanning begins.

7. Verify Tray Quantity

After scanning all required Tray IDs:

- Verify the scanned tray quantity.
- Select the **Tray Verification** checkbox.

Once verification is completed, the **Submit** button becomes enabled.

8. Save as Draft

If scanning cannot be completed:

- Click **Draft**.
- The scanned data is saved.

- Users can resume scanning later from the same point.

9.Process Status

The Process Status column visually indicates the scanning progress.

 **Grey** - Not Started

 **Partially Filled** - Draft / Scanning in Progress

 **Fully Green** - Tray Scanning Completed

10.Submit the Batch

After:

- All Tray IDs are scanned
- Tray Quantity is verified

Click **Submit**. The system will:

- Complete the Day Planning process.
- Move the batch to:

Day Planning Completed Table • Input Screening Pick Table

★Complete Workflow

- 1 **Open Day Planning.**
- 2 **Click Upload.**
- 3 **Download the Excel Template.**
- 4 **Fill the template with batch details.**
- 5 **Upload the completed Excel file.**
- 6 **Review the uploaded data in the Preview section.**
- 7 **Edit any incorrect values if required.**
- 8 **Click Submit.**
- 9 **Verify that batches appear in the Day Planning Pick Table.**
- 10 **Hover over the Plating Stock Number to view the product image and access the Visual Aid.**
- 11 **Click Tray Scan for the required batch.**
- 12 **Update Tray Quantity if necessary.**
- 13 **(Optional) Edit the Lot Quantity before starting Tray ID scanning.**

- 14 Scan or enter all Tray IDs.
- 15 If needed, save the process using Draft and resume later.
- 16 Verify the Tray Quantity by selecting the verification checkbox.
- 17 Click Submit.
- 18 Confirm that the Process Status changes to Completed (Green).
- 19 Verify that the batch moves to the Day Planning Completed Table and the Input Screening Pick Table.
